

AF-GLODOMOR

Scattered and paraffin bait

100g of bait contains: Active substance:
BROMADIOLON.....0.005 g.

Effect: After consuming the bait, bromadiolol active substance blocks reproduction of prothrombin in blood, which results in internal bleeding. Dose of 1-1.5 g. for mice, or 6-8 g. for rats is enough for extermination. This dose beside variety of conventional anticoagulants could be taken in one shot or during one day. Poisoned animals are without symptoms for two or three days, after that period symptoms appear like a natural illness or collapse without pain, after what they die usually in their hiding places.

Indication: AF-GLODOMOR paraffin and laxy baits are used against mice, rats and other detrimental rodents at farms, warehouses, industrial facilities, domestic economies and other.

Prochrome boxes

Hard plastic boxes for application of poisonous bait for rodents.

Adhesive eko-traps

Repellent substances for birds, rodents, reptiles, amphibians.

REVOLUTIONARY NEW!!! EXTERMINATION OF RODENTS WITHOUT USAGE OF POISONOUS SUBSTANCES

EradiRat and EradiMouse are revolutionary products for rodent control. Digestive tract of rodents has a unique system of water absorption regulated by complex mechanism. EradiRat and EradiMouse physically disable that mechanism and rodents become slow, before death. Typically, rats die after 4-5 days, and mice after 2-3, after regularly intake. It is safe to use near birds, fish, pets, animals on farms and people when following the instructions.

They are made of natural plant extracts and they effect on digestive tract of rodents. Granules are biodilutable, they do not contain toxins which contaminate the enviroment.
